

Key Features

Automatic feed list

Multiple sites

Wireless connection

Support for non-i-Catcher systems.

Automatic reconnection

Support for password-protected systems

Integrates with i-Catcher Console, Sentry, and Wildlife

Live mobile CCTV Monitoring

Typical Applications

Warehouse Security

Shopping Centre Security

Wide Area Surveillance

Transit System Security

Observe your CCTV system from wherever you are

One of the most noticeable problems with CCTV systems, both analogue and digital, is that in order to see what's happening on the cameras, you need to remain in one fixed location - that of the CCTV system. If this is an office far away from the monitored area, getting from the observation point to the area of activity can take too much time - certainly enough for intruders to leave quickly before they are caught. i-Catcher PocketMonitor solves this problem by providing you with a way to watch your cameras wherever you are, by utilising the latest in digital wireless technology.

Integrated monitoring on the move

i-Catcher PocketMonitor integrates perfectly into the i-Catcher system, by automatically pulling a feed list from the i-Catcher Console or Sentry system. This provides access to all feeds on one system in one easy setup - no need to remember paths to images, just the address of the system and username/password details (if necessary) are needed to access the system.

Once connection is established, the list of feeds is made available instantly via an on-screen menu, and switching between them is instant. For added flexibility, i-Catcher PocketMonitor can store the details for several sites allowing you to monitor hundreds of cameras from a single handheld device.

i-Catcher PocketMonitor is by no means limited to i-Catcher systems. The software can also access any updating JPG source, providing support for auxiliary systems.

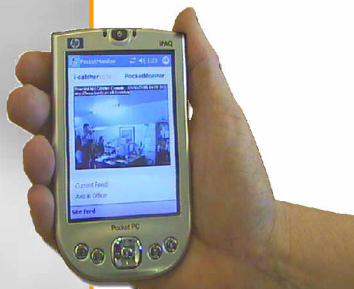

Intelligent roaming

i-Catcher PocketMonitor understands that wireless technology can't reach into every corner, and that there will be moments when the wireless network is not available. As soon as you re-enter an area with wireless connectivity, i-Catcher PocketMonitor reconnects to your digital CCTV system, and resumes live monitoring.

All of these functions combine to provide a highly flexible mobile monitoring solution, one that would be very costly to implement with an analogue system.

Ease of use is the key

i-Catcher PocketMonitor is designed with ease of use in mind, right from the moment of installation. The software installs in one easy step, and provides access direct from the start menu. Once started, i-Catcher PocketMonitor connects to the first site straight away, and immediately populates the feed list ready for use. Everything is designed to ensure the minimum of configuration.

Specifications and Features of i-Catcher PocketMonitor

Automatic feed list

i-Catcher PocketMonitor automatically fetches a list of available feeds from i-Catcher systems, providing them in an easily accessible menu.

Multiple Sites

i-Catcher PocketMonitor can store details of many sites, allowing you to switch between CCTV Systems instantly.

Wireless Connection

i-Catcher PocketMonitor works with your device's Wireless/Wi-Fi connection to provide wire-free observation

Support for non-i-Catcher systems

i-Catcher PocketMonitor can show live feeds from other systems, such as video servers by implementing each feed as a CCTV site. By combining i-Catcher Systems with video servers and network video cameras, you can monitor potentially hundreds of cameras, all from one mobile device.

Automatic Reconnection

i-Catcher Pocketmonitor will reconnect to feeds automatically when moving between areas of wireless coverage. This means you'll never miss the action just because the corridor you were in is out of wireless range.

Supports password protected systems

i-Catcher PocketMonitor features options to provide authentication information when connecting to the feed sources, keeping your CCTV system secure.

Integration with i-Catcher Console and Sentry

i-Catcher PocketMonitor is designed to work seamlessly with the i-Catcher range of digital CCTV products. Setting up the software takes less than a minute

Live mobile CCTV monitoring

Images shown on i-Catcher PocketMonitor are live, received instantly from the i-Catcher CCTV system, so you don't miss out on the action.

Minimum System Requirements

ARM-based mobile device (e.g. PDA or SmartPhone)

50K free storage space (dependent on size of images being displayed)

Microsoft PocketPC 2003, Windows Mobile 2005 or higher

Networking connectivity, such as Wi-Fi, dialup via bluetooth, or dialup via IR.

Other i-Catcher Products

i-Catcher Sentry

A complete single-camera CCTV system for your PC

i-Catcher Wildlife

Turns your PC into a complete wildlife observation system

i-Catcher Console

Control and manage up to 255 cameras from one central location

i-Catcher Alert

Provides the sophisticated alerting for i-Catcher Console

i-Catcher Monitor

Provides a professional monitoring system for your feeds

i-Catcher Video Server

Use supported multi-input cards to create cost-effective network feeds.
