## Detect, Observe, Recognize, Identify (DORI)

	DORI definition	Distance
Detect	25 px/m (8 px/ft)	42 m (137.7 ft)
Observe	63 px/m (19 px/ft)	16 m (52.4 ft)
Recognize	125 px/m (38 px/ft)	8 m (26.2 ft)
Identify	250 px/m (76 px/ft)	4 m (13.1 ft)

The DORI values are calculated using pixel densities for different use cases as recommended by the EN-62676-4 standard. The calculations use the center of the image as the reference point and consider lens distortion. The possibility to recognize or identify a person or object depends on factors such as object motion, video compression, lighting conditions, and camera focus. Use margins when planning. The pixel density varies across the image, and the calculated values can differ from the distances in the real world.

## Highlighted capabilities

### AXIS Edge Vault

AXIS Edge Vault is the hardware-based cybersecurity platform that safeguards the Axis device. It forms the foundation that all secure operations depend on and offer features to protect the device's identity, safeguard its integrity and protect sensitive information from unauthorized access. For instance, **secure boot** ensures that a device can boot only with **signed OS**, which prevents physical supply chain tampering. With signed OS, the device is also able to validate new device software before accepting to install it. The secure keystore is the critical building-block for protecting cryptographic information used for secure communication (IEEE 802.1X, HTTPS, Axis device ID, access control keys etc.) against malicious extraction in the event of a security breach. The **secure keystore** and secure connections are provided through a Common Criteria or FIPS 140 certified hardware-based cryptographic computing module. Furthermore, signed video ensures that video evidence can be verified as untampered. Each camera uses its unique video signing key, which is securely stored in the secure keystore, to add a signature into the video stream allowing video to be traced back to the Axis camera from where it originated. To read more about AXIS Edge Vault, see [axis.com/solutions/edge-vault](https://www.axis.com/solutions/edge-vault)

### AXIS Object Analytics

AXIS Object Analytics is a pre-installed, multi-featured video analytics that detects and classifies humans, vehicles, and types of vehicles. Thanks to AI-based algorithms and behavioral conditions, it analyzes the scene and their spatial behavior within – all tailored to your specific needs. Scalable and edge-based, it requires minimum effort to set up and supports various scenarios running simultaneously

### AXIS Audio Analytics

AXIS Audio Analytics uses adaptive audio detection to generate alarms on sudden increases in sound volume. With AI-based classifiers, it can detect screaming and shouting. You can also get extra confirmation by combining Axis audio analytics with video analytics. This smart application only transmits metadata, ensuring privacy is safeguarded. A core feature of AXIS OS, AXIS Audio Analytics comes pre-installed at no extra cost.

### AXIS Live Privacy Shield

Remotely monitor activities both indoors and outdoors while safeguarding privacy in real-time. With AI-based dynamic masking you can choose what to mask or blur while addressing rules and regulations protecting privacy and personal data. The application enables masking of moving and still objects such as humans, license plates,

or backgrounds. The application works in real-time and on both live and recorded video streams.

### Zipstream

The Axis Zipstream technology preserves all the important forensic details in the video stream while lowering bandwidth and storage requirements by more than 50%. Zipstream includes intelligent algorithms, which ensure that relevant forensic information is identified, recorded, and sent in full resolution and frame rate.
