

AXIS Queue Monitor

Don't keep them waiting

AXIS Queue Monitor provides statistics about queue duration and queue fluctuations over the course of the day. By analyzing these statistics over time, you can quickly understand your service-cycle time and identify where bottlenecks occur. This valuable insight helps you enhance service planning, manage queues more effectively and improve business performance. Up to three queue thresholds can be set to prompt selected actions when exceeded. This facilitates shorter waiting times and increased visitor satisfaction. Furthermore, the application can be remotely configured, managed and monitored, allowing you to view statistics from several cameras and locations at the same time.

- > Reduce waiting time
- > Set queue thresholds with alerts
- > Increase visitor satisfaction
- > Optimize staff planning
- > Streamline operational efficiency

AXIS Queue Monitor

Environmental responsibility:
axis.com/environmental-responsibility

Application	
Compute platform	Edge
Supported devices	For a complete list of recommended and supported products, go to axis.com
Functionality	Automatic upload to separately sold AXIS Store Data Manager and AXIS Store Reporter. Queue data stored up to 90 days without SD card.
Configuration	Web configuration interface included.
Scenarios	
Typical applications	Indoor environments where people line up in queues.
System integration	
Application Programming Interface	Open API for software integration. Specifications available at axis.com
Event integration	Integrates with camera event management system to enable event streaming to video management software and camera actions such as I/O control, notification, and edge storage.
General	
Languages	English, Japanese, Russian
